Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

Case Vehicle (A): 1999 GMC
 Type: Suburban SLT 4 x 4, 4-door SUV
 Driver: 36-year-old female
 CDC: 03-RFEW-4

SITUATION

(Slide 1) It was daytime and snowing, and (slide 2) the 2-lane asphalt road surface was slush covered and slippery, but free of defects. Case vehicle (A) was traveling south at a driver-estimated speed of 72 kph (45 mph) in the southbound lane. (Slide 3) The driver of case vehicle (A) lost control of the vehicle, which veered to the left, went into a counterclockwise yaw, (slide 4) exited the east edge of the road surface, entered into a front yard, and (slide 5) struck a tree with its right side at the right-front fender. The driver of case vehicle (A) was taken to a regional level-1 trauma facility by ambulance and was hospitalized for one day. The right-front and right-rear passengers were taken to a regional level-1 trauma facility by ambulance and treated and released. The right-front passenger was later taken to his personal physician for a swollen ankle.

GENERAL VEHICLE DAMAGE AND ESTIMATED CRASH SEVERITIES

(Slide 6) The right-front fender of case vehicle (A) was severely crushed to the left, (slide 7) with the maximum crush of 73 cm at the center of the right fender. (Slide 8) Direct damage to case vehicle (A) began 50 cm to the rear of the right-front bumper corner and extended 56 cm further rearward.

Using the WinSMASH accident-reconstruction program and (slides 9, 10, 11 and 12) a crush profile measured for case vehicle (A), the following impact severity was calculated:

Vehicle	Variable	Calculated Velocity Change - kph (mph)		
		Total	Longitudinal	Latitudinal
Case Vehicle (A)	delta V	35 (22)	-6 (-4)	-34 (-21)

DESCRIPTION OF DAMAGE TO CASE VEHICLE (A)

Exterior

(Slide 13) On the right side, the upper and (slide 14) lower A- and B-pillars, roof siderail, and front door were damaged. (Slide 15) The right-front wheel was torn off. The front door was jammed closed but had been pried open by rescue personnel. (Slide 16) The rear door and quarter panel were slightly deformed and the right-side wheelbase was reduced 21 cm.

In the front, (slide 17) the hood, the right headlight assembly, the grille, and both hood hinges were damaged, and the right-front components were drawn rearward. The hood latch was damaged and jammed closed, but had been pried open by rescue or tow-yard personnel in order to disconnect the battery. (Slide 18) The rear edge of the hood was elevated, and it contacted, but did not penetrate, the damaged windshield. The bond was separated along the entire bottom edge of the windshield

On the left side, (slide 19) the fender was deformed, (slide 20) but there was no significant change in the wheelbase. (Slide 21) There was no damage to the rear of the vehicle.

Interior

This vehicle was equipped with steering-wheel and passenger frontal-impact airbags, and (slides 22 and 23) both deployed during this right-side impact. (Slides 24, 25, 26 and 27) There was no damage to the module flaps/covers of either the steering-wheel or (slides 28, 29, 30 and 31) passenger airbag modules. (Slides 32 and 33) There was no damage to the steering-wheel rim or (slides 34 and 35) spokes. (Slide 36) The steering column was rotated to the left but there was no apparent vertical rotation of the steering column. The following intrusions were noted and measured:

Location	Component	Distance (cm)	Direction
Driver (slides 37 & 38)	Transmission tunnel	20	to left
Right-front (slide 39) (slide 40) (slide 41)	Floor	15	up
	Instrument panel	11	to rear
	A-pillar	10	to left
	Door panel	10	to left
	A-pillar	9	to rear
	Door panel	9	to rear

In addition, (slide 42) the gas pedal was bent upward and the brake pedal was bowed. (Slide 43) The trim of the upper, mid, and lower instrument panels, the upper vent outlets, and the control knobs were knocked loose by impact forces. (Slide 44) The left sunvisor was broken off. (Slide 45) The rearview mirror was broken. The center console was deflected to the left. (Slides 46 and 47) The climate control ducts were crushed by the displacement of the heater and air-conditioning cores. In addition, the right-front door interior, right-front door armrest, right-front door hardware, right-front door window glass, (slide 48) right-roof siderail, and right B-pillar were damaged. (Slide 49) There was some dried blood on the lower right corner of the passenger-side frontal-impact airbag fabric. This blood was possibly from the right-rear passenger when he checked on the right-front passenger after the crash.

OCCUPANT KINEMATICS AND INJURIES

(Slide 50) The 5-ft, 6-in, 135-lb, 36-year-old female driver was not wearing the three-point belt, (slide 51) but the frontal-impact airbag deployed. (Slide 52) There were no witness marks on the plastic D-ring. On impact, the driver moved to the right and rearward relative to the vehicle interior, due to the rightward and counterclockwise rotational motion of the vehicle. (Slide 53) After the crash she was found on the floor of the vehicle behind the right-front seat. She sustained a right subdural hematoma with loss of consciousness, possibly from head contact with the center roof console (slides 54 and 55), as evidenced by a scuff mark. (Slide 56) She sustained bilateral pedicle fractures of C2, with a 2-mm anterior displacement of C2 over C3, due to flexion and compression of the neck, possibly from head contact with the floor and/or the right-side rear door. She sustained minor compression fractures of T5, T6, and T11 due to compressive loading of the spine, probably from the same head contact that resulted in the neck fractures.

She also sustained a contusion to the posterior region of her right shoulder, possibly from contact with the right-front seatback or from contact with the floor. She sustained contusions to her right and left buttocks, possibly from contact with the center console, (slides 57 and 58) as evidenced by a scuff mark, or possibly due to contact with the floor. She sustained contusions to her right and left knees, from unknown contacts. (Slide 59) She sustained an open fracture to the distal shaft of the right fibula, probably from contact with the transmission tunnel.

(Slide 60) The 4-ft, 0-in, 55-lb, 10-year-old male, right-front passenger has multiple birth defects including cerebral palsy. (Slide 61) He was restrained by a five-point harness in a “Tumble Form” positioning seat that was secured by the lap portion of the vehicle’s three-point belt, and the passenger-side airbag deployed. (Slide 62) There were no witness marks on the plastic D-ring, (slide 63) but the lap portion of the three-point belt was well worn. The top tether of the “Tumble Form” seat was not fastened. The right-front passenger sustained a hairline fracture to his left distal fibula, probably from leg contact with the glove box area, (slide 64) as evidenced by a scuff mark on the plastic cover.

(Slide 65) The 5-ft, 8-in, 130-lb, 15-year-old male, right-rear passenger was restrained by the three-point belt. (Slide 66) There were wear marks on the plastic D-ring, indicating general belt use, but there were no clear witness marks from occupant loading. He sustained multiple small lacerations to his face, neck, and both hands, due to flying broken glass. He sustained a small puncture wound to the left occipital region, probably due to flying broken glass.

The following tables and attached drawings (slides 67, 68 and 69) summarize the injuries sustained by the three occupants of case vehicle (A).

VEHICLE OCCUPANT CONTACT DIAGRAM

CODES FOR COLUMN B, OCCUPANT SPACE NUMBER

OCCUPANT SPACE NUMBER IS A TWO-DIGIT CODE. THE USE OF THE CODE IS DETERMINED BY THE VEHICLE SEAT CONFIGURATION AT THE TIME OF THE ACCIDENT.

FIRST DIGIT

THE FIRST DIGIT (LEFT DIGIT) DENOTES THE SEAT ROW, WITH CODE VALUES FROM 1 TO 5.

SECOND DIGIT

THE SECOND DIGIT (RIGHT DIGIT) DENOTES THE POSITION ON THE SEAT AND, IN SOME INSTANCES, THE WIDTH OF THE SEAT.

- | | | | |
|--------------------------|-----------------|-------------------------|---|
